TM TOKENMETAL

STELLAR HACK MERIDIAN · LISBOA · OCT 2026

LIVE ON STELLAR · 1 USDC MINIMUM

First trade, thirty seconds.

A gamified investing app on Stellar for people who have never traded crypto before.

Powered by Cryptodays · Spain

TOKEN-METAL.VERCEL.APP

WHERE BEGINNERS QUIT

Crypto onboarding is still broken for people who have never traded.

Trading terminals.

Order books, slippage, jargon. They open the app, freeze, and close it.

Pure gambling.

Meme coins with no guidance. Influencer picks that dump by lunch.

No middle ground.

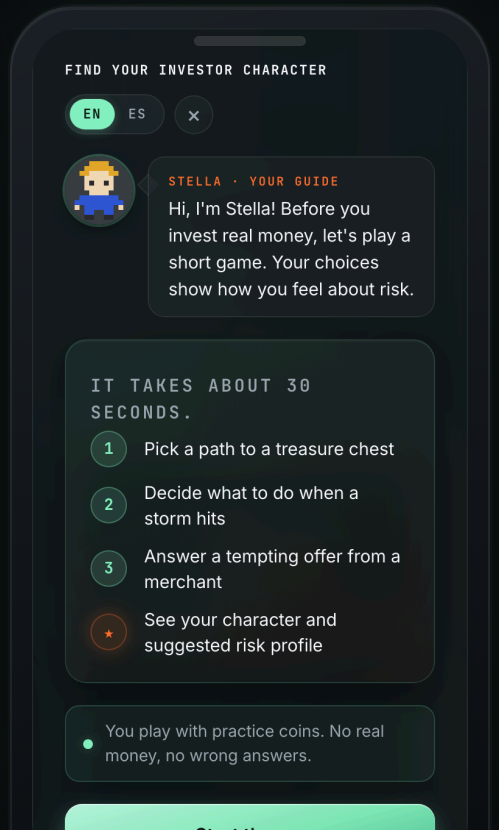

Nothing between a Bloomberg terminal and a casino. So they stay on the sidelines.

A BEHAVIORAL QUIZ · NOT A FORM

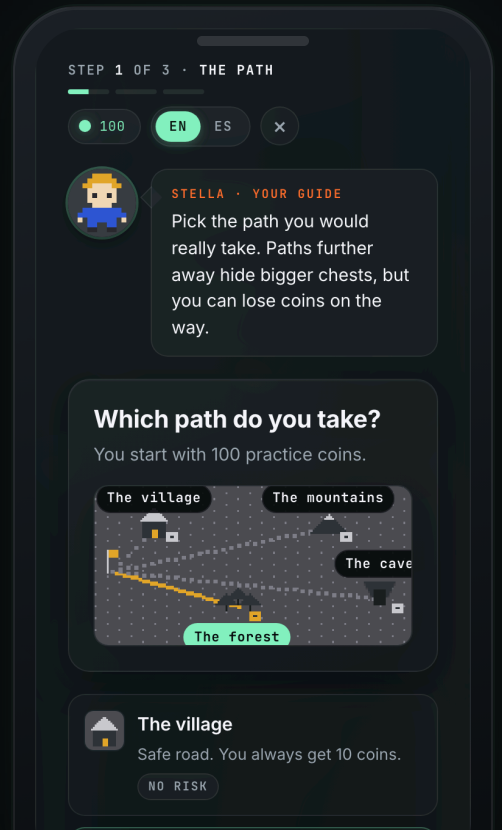

We measure what people do, not what they say.

Three real decisions, not a declared risk tolerance. The quiz even warns hype-prone users when the game reveals they are.

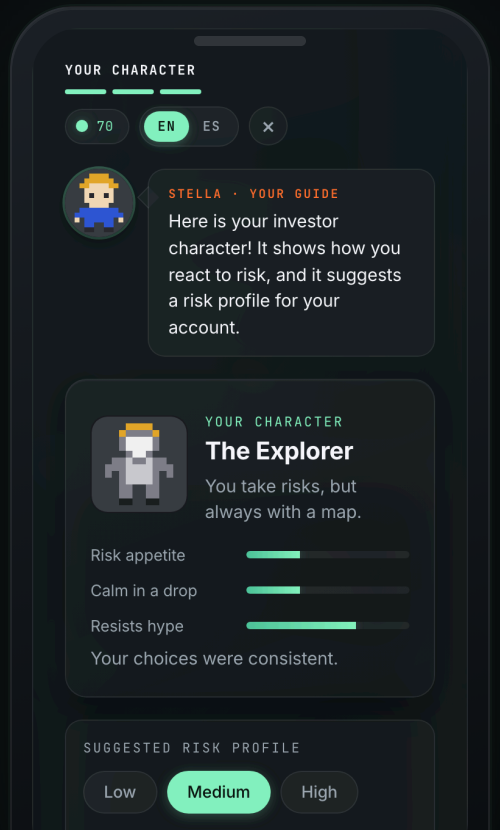

01

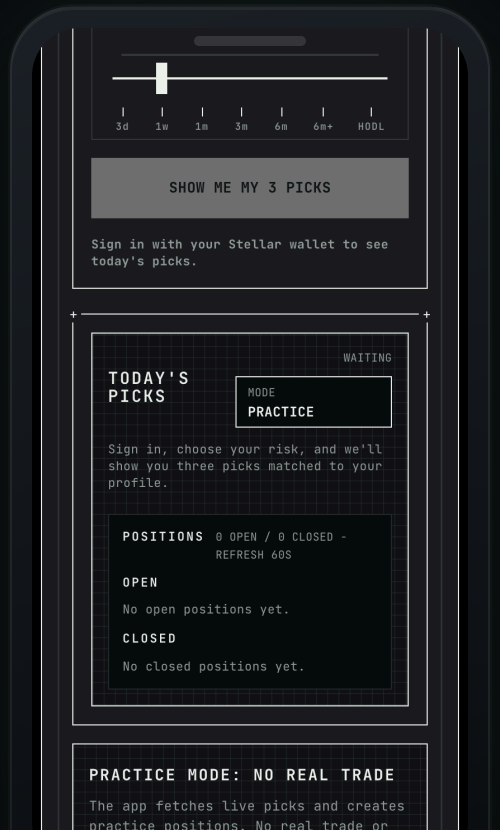

02

03

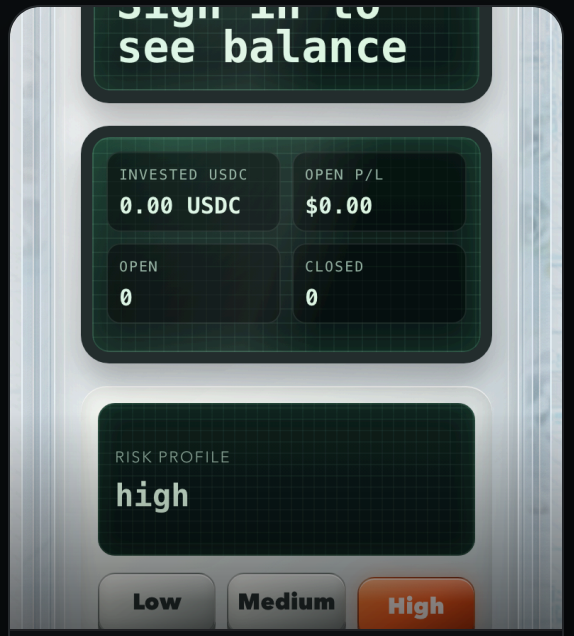

04

ONE PRODUCT. MANY SURFACES.

Every feature, in every universe.

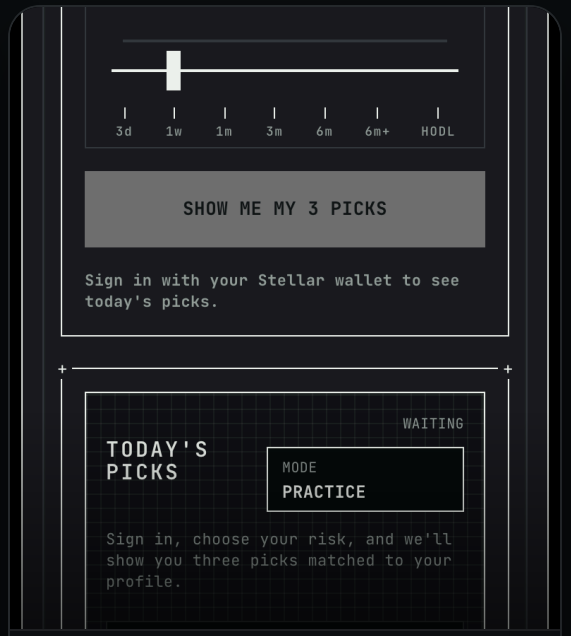

Three inputs, three picks, atomic Stellar settlement, live positions, practice mode. Each one works across every skin.

METAL

Risk + capital + horizon

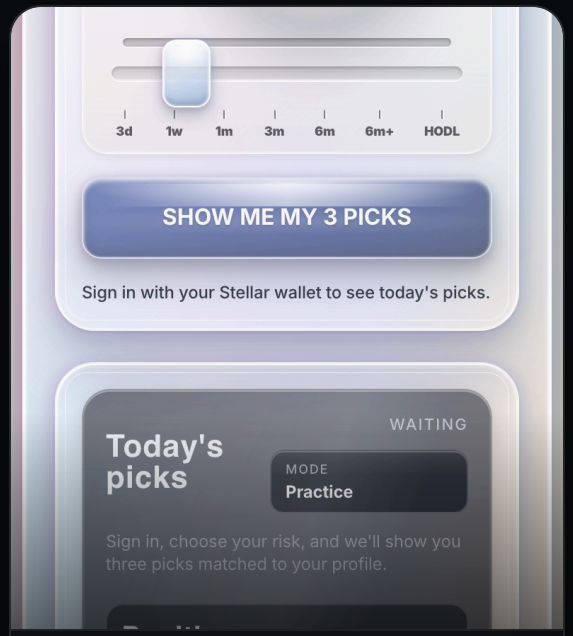

Three inputs any beginner can answer.

GRID

Three live picks

Scored by our Stellar engine. Practice mode means no wallet needed to look.

GLASS

Positions & activity

On-chain truth. CSV export. One-tap sell.

SKINS

Switch universes

Pick the mood. The whole app reskins instantly.

THE BARRIER IS CONFIDENCE · THE CHAIN IS STELLAR

33M Americans will buy their first crypto in 2026. Half of them are blocked by "I don't understand."

48%

BLOCKED BY "I DON'T UNDERSTAND"

The #1 barrier for non-holders. Not price, not access. Confidence.

<$0.01

STELLAR NETWORK FEE

Low enough that a $1 trade stays 99% capital, not fee. Makes a beginner-first product viable.

$1B+

STELLAR RWA · STABLECOINS

PayPal USD. Franklin Templeton. Users graduate from first trade to real yield on the same chain.

Studies show gamification lifts fintech engagement ~48% and 90-day retention 30–40%. Stellar built the rails. We build the UX layer that routes the next cohort into Stellar's stablecoin and RWA ecosystem.

THE MODEL

2% on buys. 0% on sells.

Active users average two $50 buys per month, so ~$2 revenue per user per month, or ~$24 per year at the 2% fee. Premium skins add a $1–3 monthly secondary line once a user retains. Cryptodays IRL distribution keeps blended CAC near zero, pushing realistic 12-month LTV to around **$40 per active user**.

COMPETITORS

Coinbase

CUSTODIAL EXCHANGE

We give a **30-second behavioral quest** instead of a 500-coin menu, and a **non-custodial** flow instead of a KYC wall.

Robinhood Crypto

GAMIFIED · CUSTODIAL · US-ONLY

We gamify **risk profiling**, not trading dopamine. Three vetted Stellar picks per session, settled in the user's wallet.

Acorns

SET-AND-FORGET · FIAT ONLY

We match Acorns' simplicity with real on-chain crypto, backtested picks, and **a product that feels like a game.**

THE ASK

01 An **SDF ecosystem grant** to fund six months of Spain-focused growth and retention testing.

02 **Intros** to Stellar payment partners (MoneyGram, anchors) for USDC on-ramp partnerships.

03 Hackathon prize deployed into **Cryptodays paid acquisition** to prove our CAC-to-retention thesis.
